EDUCATION

Wilfrid Laurier University **September 2023-April 2027**

- **Honours Bachelor of Science (BSc) in Computer Science (UI/UX Minor)**
  - Co-President of Laurier Computing Society

EXPERIENCE

Incoming Technology & Data Intern - CPP Investments *(Internship)* **January 2027-April 2027**

Software Engineer Intern - Scotiabank *(Internship)* **September 2026-Present**

- Developed features for a secure enterprise web application, building responsive front-end functionality with **React**, **Next.js**, and **TypeScript** and supporting backend services with **Python** and **FastAPI**.
- Designed and integrated **REST APIs**, connecting application features with **PostgreSQL** database services while implementing data validation and authentication controls.
- Developed and maintained automated tests using **Vitest**, **Pytest**, and **Playwright**, validating front-end, backend, API, and end-to-end functionality to ensure reliable releases.
- Debugged application issues across the full stack, improving **code quality**, **maintainability**, and **reliability** through testing, code reviews, and collaborative development with cross-functional engineering teams.

Front-End Engineer Intern - Inspexta *(Internship)* **January 2026-April 2026**

- Built and optimized interactive UI components for a field inspection web platform using **React**, **JavaScript**, **HTML**, and **CSS**, improving responsiveness and usability for fire alarm and site inspectors.
- Developed scalable front-end architecture and reusable components in **React**, improving development efficiency and consistency across the application.
- Translated **Figma UI/UX** designs into production-ready React components, maintaining consistency with product branding and **WCAG** accessibility standards.

Web Developer - 360 Medical *(Contract)* **May 2024 - January 2025**

- Revamped company websites using **Shopify** and **WordPress**, implementing modern design principles and utilizing **Figma** for UI/UX prototyping.
- Increased organic traffic by **19%** through performance-driven **SEO** and UX enhancements.
- Standardized a library of **95+** product pages using modular **HTML/CSS**, implementing a reusable component architecture that reduced layout debt and improved site-wide maintainability.

PROJECTS

Seat Notifier for LORIS - Full-Stack Web Application

- Designed and developed a full-stack seat availability notification system for university courses, building a responsive **React**-based frontend (**HTML, CSS, JavaScript**) that guides users through semester, course, and section selection with autocomplete and live seat status.
- Constructed a **Python**-based **Selenium** scraper to extract real-time enrollment data from LORIS, managed a **SQLite** database for user subscriptions, and automated real-time WhatsApp notifications via background tasks for seat availability changes.

SKILLS

- **Languages:** Java, Python, TypeScript, JavaScript, SQL, HTML, CSS
- **Frameworks & Libraries:** React, Next.js, FastAPI, Flask, Selenium, BeautifulSoup
- **Tools & Technologies:** PostgreSQL, SQLite3, REST APIs, Git, GitHub, Docker, Jenkins, Vitest, Pytest, Playwright, Replit, CRM Systems
- **Design & Web:** Figma, Canva, Drupal, Shopify, WordPress, Adobe Creative Suite
